DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 26-38, 40, 41, and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Attia (6,080,281) in view of Barnhard, IV et al (4,058,420) and the article from Science and Technology Review.

Attia discloses the use of sol-gel processing to form mixed oxides. The mixed oxides can be energetic. The particular sol-gel process is not disclosed.

Barnhard, IV et al discloses the use of RDX and PETN in a gelled explosive that uses silica gel as the thickener.

The article from Science and Technology Review (pg 23). teaches the use of a sol-gel process that is less expensive.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the sol-gel processing disclosed by Attia with the explosive taught by Barnhard since Attia discloses that the sol-gel processing is capable of being used with energetic applications. It would also have been obvious to use the improved sol-gel process as taught by the Science and Technology article with the composition

Art Unit: 1755

disclosed by Attia and Barnhard since the article suggests that the method is less expensive and also that it forms a better aerogel.

3. Claims 1, 26-38, 40, 41, and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Attia (6,080,281) in view of Mueller et al (3,730,789) and the article from Science and Technology Review.

Attia discloses the use of sol-gel processing to form mixed oxides. The mixed oxides can be energetic. The particular sol-gel process is not disclosed.

Mueller et al teaches the use of ammonium perchlorate in a gelled monopropellant composition that uses silica gel as the thickener.

The article from Science and Technology Review (pg 23), teaches the use of a sol-gel process that is less expensive.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the sol-gel processing disclosed by Attia with the explosive taught by Mueller since Attia discloses that the sol-gel processing is capable of being used with energetic applications. It would also have been obvious to use the improved sol-gel process as taught by the Science and Technology article with the composition disclosed by Attia and Mueller since the article suggests that the method is less expensive and also that it forms a better aerogel.

4. Claims 1, 26-38, 40, 41 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Katsuta et al(4,317,691) in view of Mueller et al (3,730,789) and the article from Science and Technology Review.

Art Unit: 1755

Katsuta discloses the use of aerogel which is made by the sol-gel processing with an explosive composition. The claims do not require all of the composition to be made by the sol-gel process and this reference discloses a portion of the explosive being formed by the sol-gel process.

Mueller et al discloses the use of ammonium perchlorate in a gelled monopropellant composition that uses silica gel as the thickener.

The article from Science and Technology Review (pg 23). teaches the use of a sol-gel process that is less expensive.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the sol-gel processing disclosed by Katsuta with the explosive taught by Mueller since Katsuta discloses that the sol-gel processing is capable of being used with explosive applications. It would also have been obvious to use the improved sol-gel process as taught by the Science and Technology article with the composition disclosed by Attia and Mueller since the article suggests that the method is less expensive and also that it forms a better aerogel.

5. Claims 1, 26-38, 40, 41 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Katsuta et al(4,317,691) in view of Barnhard, IV et al (4,058,420) and the article from Science and Technology Review.

Katsuta discloses the use of aerogel which is made by the sol-gel processing with an explosive composition. The claims do not require all of the composition to be made by the sol-gel process and this reference discloses a portion of the explosive being formed by the sol-gel process.

Art Unit: 1755

Barnhard, IV et al discloses the use of RDX and PETN in a gelled explosive that uses silica gel as the thickener.

The article from Science and Technology Review (pg 23), teaches the use of a sol-gel process that is less expensive.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the sol-gel processing disclosed by Katsuta with the explosive taught by Barnhard since Katsuta discloses that the sol-gel processing is capable of being used with explosive applications. It would also have been obvious to use the improved sol-gel process as taught by the Science and Technology article with the composition disclosed by Attia and Barnhard since the article suggests that the method is less expensive and also that it forms a better aerogel.

Response to Arguments

6. Applicant's arguments filed have been fully considered but they are not persuasive. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

In response to applicant's arguments, the recitation "solid" has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not

Art Unit: 1755

depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aileen B. Felton whose telephone number is 571.272.6875. The examiner can normally be reached on Monday-Friday 6:30-4:00, except alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo can be reached on 571.272.1233. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
